# Trapeze®

REMOTE ACCESS FOR ITS
Control Centre Web Client

With high workloads and increasing demands for remote working, staff require the ability to access their tools whenever and wherever required.

With Trapeze's Control Centre Web Client for ITS, dispatchers can monitor the network from a Smartphone, Tablet or home PC. Armed with the web client's overview module and existing control centre system, staff can remotely monitor the situation, enabling those dispatchers who are communicating directly with drivers to effectively manage any disruptions.

As a result, the solution relieves the pressure on dispatchers, helping to ensure vehicles are on time, duties are fulfilled and KPIs are consistently met.

Key Benefits

Customer Benefits

- Flexible, more efficient working for staff
- Improved visibility, provides network, route and disruption information to involved staff anywhere anytime
- Reduced pressure on dispatchers enables focus on priority tasks
- In-depth analysis and accurate reporting

Passenger Benefits

- Reduce the impact of disruption
